

# TrinWare Empowers Colorado Non-Profits to **Do More Good**

Every dollar diverted to technical troubleshooting is a dollar taken away from your mission

*Whether you are providing housing stability in Denver or environmental advocacy in Fort Collins, **your technology should be a force multiplier, not a budget drain.***

*The stakes for non-profits have shifted. Donors no longer just care about your impact; they care about your data integrity. If you're managing sensitive donor information or constituent records in The Front Range, **"basic" IT is no longer enough to protect your reputation.***

## **WE KNOW THE UNIQUE HURDLES DENVER NON-PROFITS FACE RIGHT NOW.**

### **IT ISN'T JUST "SLOW COMPUTERS"; IT'S ABOUT THE FRICTION THAT PREVENTS IMPACT**

#### **DONOR TRUST**

Your donors aren't just giving money; they're giving you their data. In an era of high-profile breaches, the fear of a "we've been hacked" email to your legacy donors is a weight no Executive Director should have to carry.

#### **THE MULTI-GENERATIONAL TECH GAP**

You have veteran advocates who prefer a legal pad and Gen Z interns who live in the cloud. Bridging that gap so everyone can collaborate without a headache is a constant struggle.

#### **GRANT DEADLINES**

There is nothing quite like a system crash at 4:55 PM on the day a major federal grant is due. When your tech is reactive, you're always one glitch away from missing a funding cycle.

#### **SLOW TECHNOLOGY**

Because the main systems are slow, your team starts using their personal Dropobox, Gmail, or unencrypted emails to get work done. It feels efficient until it becomes a massive security liability.

## **WE LOOK AT YOU AS A PARTNER IN MAKING COLORADO BETTER**

### **OUR FRAMEWORK IS DESIGNED SPECIFICALLY TO HONOR YOUR BUDGET WHILE AMPLIFYING YOUR REACH**

**.We don't just sell you IT Management.** We sit down with you to understand your 2026 goals. We build a roadmap that moves you from "fixing things" to "scaling impact," ensuring your team can work from the office, the field, or a coffee shop in LoDo without a hitch.

**We wrap your donor data in enterprise-grade security.** We treat a local food bank's data with the same "Zero-Trust" rigor we use for our defense manufacturing clients. Why? Because your reputation is your most valuable asset.

**When your IT is managed, your overhead becomes predictable.** One flat monthly fee means no more surprise "emergency" bills that eat into your program budget. Your payout is more time, more security, and more lives changed.

### **You didn't start a non-profit because you wanted to manage a network. You did it because you saw a need in our Colorado community and decided to fill it.**

Let us handle the bits and bytes so you can handle the hearts and minds. We're not just an IT company; we're your neighbors, and we want to see your mission succeed.

## TrinWare's **Journey**

Established in Colorado since 2004, **TrinWare provides complete Next Generation IT Managed Services and custom computer production and fulfillment** while assuring the highest levels of return on investment, security, and customer satisfaction.

**With over 450+ years of combined experience,** our customers look upon us as their trusted advisor to provide IT guidance. We continually pursue mutually beneficial and equitable business relationships with our customers, vendors, and suppliers.
